### Description

abc\_to\_dq.xbe employs the following equations to relate the general variables van, vbn, vcn to vds, vqs:

$$\begin{aligned}V_{qs} &= \frac{2}{3} V_{an} - \frac{1}{3} (V_{bn} + V_{cn}), \\V_{ds} &= -\frac{1}{\sqrt{3}} (V_{bn} - V_{cn}).\end{aligned}$$
